

WHAT IS CLAIMED IS:

1. A switch assembly comprising:
a push member adapted to be connected to a lid of an electronic appliance, and
an activation member adapted to be disposed to a base of the electronic appliance, a switch located at a position where the activation member movably touches the switch, the activation member being moved by a movement of the push member.
2. The switch assembly as claimed in Claim 1, wherein a head piece is connected to a distal end of the push member.
3. The switch assembly as claimed in Claim 1, wherein the push member is connected to an operation button.
4. The switch assembly as claimed in Claim 1, wherein the activation member is a plate comprising two horizontal portions and an inclined portion connected between the two horizontal portions.
5. The switch assembly as claimed in Claim 4, wherein the head piece comprises an inclined surface which has the same slope of inclination as the inclined portion of the activation member.
6. The switch assembly as claimed in Claim 1, wherein a light device is located beneath the activation member.
